Key

All figures are given in millions of minutes of telecommunications traffic for the public telephone network.

The map shows all intra-European routes with a combined 2004 volume of more than 350 million minutes.

Traffic Flows

800	500	300
Million Minutes		

Each band is proportional to the total annual traffic on the public telephone network in both directions between each pair of countries.

Total Outgoing Traffic

250	1,000	5,000
Million Minutes		

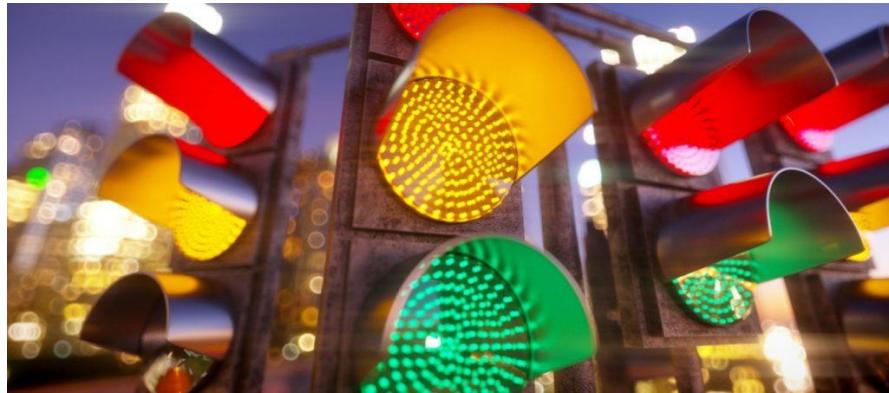

The area of each circle is proportional to the volume of the total annual outgoing traffic from each country.

On routes where traffic in one direction accounts for more than 80 percent of the total, an arrow shows the direction most of the traffic flows.
