Faculty / Department: Electronics, Telecommunications and Information Technology
Domain: Telecommunication Technologies and Systems
Course : MDCR - EDOS412T
Enrollment Year: $\qquad$ Examination Session $\qquad$ January $\qquad$ / __2019

## SUBJECT No. 1

Time allowed: $\mathbf{2}$ hours; All materials/equipments authorized
Instructor: conf. Radu Damian Student: $\qquad$ Grupa $\qquad$

Note. Except where otherwise specified, assume $50 \Omega$ reference impedance.
Note. Any CAD solution (Matlab, Mathcad, ADS) must be accompanied by the submission of the script/project at the end of the examination.

1. For a load composed from a $37 \Omega$ resistor paralel with a 1.15 nH inductor, at 7.1 GHz , compute the normalized admittance (1p) and the normalized impedance (1p).
2. For a normalized impedance equal to $0.880+j \cdot 1.020$ compute the corresponding reflection coefficient ( $\mathbf{0 . 5 p}$ ) and then plot on a Smith Chart (only the external circle and the complex plane axes) the corresponding point ( $\mathbf{0 . 5 p}$ ).
3. A quarter wave transformer is designed to match a $26 \Omega$ load to a $50 \Omega$ source at 7.3 GHz . Which is the impedance seen by the source at 2.9 GHz . ( $\mathbf{2 p}$ )
4. A $\lambda / 7$ section of an open-circuited transmission line, with parameters (per unit length) $R=G=0$, $\mathrm{L}=1.35 \mathrm{nH} / \mathrm{cm}$ and $\mathrm{C}=2.65 \mathrm{pF} / \mathrm{cm}$, is used as a capacitor at 8.3 GHz . Find the value of the capacitance. (2p).
5. The scattering parameters of a transistor at 12.3 GHz are as follows:

| $\mathrm{S}_{11}$ |  | $\mathrm{~S}_{12}$ |  | $\mathrm{~S}_{21}$ |  | $\mathrm{~S}_{22}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mag. | Ang. | Mag. | Ang. | Mag. | Ang. | Mag. | Ang. |
| 0.640 | $154.1^{\circ}$ | 0 | $0^{\circ}$ | 1.749 | $-13.9^{\circ}$ | 0.550 | $-143.0^{\circ}$ |

a) Design the match at both input and output with single-stub matching sections (shunt stub solution) which offers maximum gain. (1.5p)
b) Draw the match schematic. ( $\mathbf{0 . 5 p}$ )
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $135 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). ( $\mathbf{1 p}$ )
e) If however you know the real value of $\mathrm{S}_{12}=0.090 \angle-28.5^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)

a) Design the match at both input and output with single-stub matching sections (shunt stub solution) which offers maximum gain. (1.5p)
b) Draw the match schematic. (0.5p)
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $120 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). ( $\mathbf{1 p}$ )
e) If however you know the real value of $S_{12}=0.084 \angle-18.0^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)

Domain: Telecommunication Technologies and Systems
Course : MDCR - EDOS412T
Enrollment Year: $\qquad$ Examination Session $\qquad$ January $\qquad$ / __2019

# SUBJECT No. 11 <br> Time allowed: 2 hours; All materials/equipments authorized 

Instructor: conf. Radu Damian Student: $\qquad$ Grupa $\qquad$

Note. Except where otherwise specified, assume $50 \Omega$ reference impedance.
Note. Any CAD solution (Matlab, Mathcad, ADS) must be accompanied by the submission of the script/project at the end of the examination.

1. For a load composed from a $50 \Omega$ resistor series with a 0.99 nH inductor, at 7.0 GHz , compute the normalized admittance (1p) and the normalized impedance (1p).
2. For a normalized impedance equal to $0.925+j \cdot 1.175$ compute the corresponding reflection coefficient ( $\mathbf{0 . 5 p}$ ) and then plot on a Smith Chart (only the external circle and the complex plane axes) the corresponding point ( $\mathbf{0 . 5 p}$ ).
3. A quarter wave transformer is designed to match a $27 \Omega$ load to a $50 \Omega$ source at 10.0 GHz . Which is the impedance seen by the source at 4.1 GHz . (2p)
4. A $\lambda / 7$ section of an open-circuited transmission line, with parameters (per unit length) $R=G=0$, $\mathrm{L}=2.60 \mathrm{nH} / \mathrm{cm}$ and $\mathrm{C}=2.30 \mathrm{pF} / \mathrm{cm}$, is used as a capacitor at 11.2 GHz . Find the value of the capacitance. (2p).
5. The scattering parameters of a transistor at 14.4 GHz are as follows:

| $\mathrm{S}_{11}$ |  | $\mathrm{~S}_{12}$ |  | $\mathrm{~S}_{21}$ |  | $\mathrm{~S}_{22}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

2. For a normalized impedance equal to $1.025+\mathrm{j} \cdot 1.075$ compute the corresponding reflection coefficient ( $\mathbf{0 . 5 p}$ ) and then plot on a Smith Chart (only the external circle and the complex plane axes) the corresponding point ( $\mathbf{0 . 5 p}$ ).
3. A quarter wave transformer is designed to match a $46 \Omega$ load to a $50 \Omega$ source at 9.7 GHz . Which is the impedance seen by the source at 3.7 GHz . (2p)
4. A $\lambda / 12$ section of an open-circuited transmission line, with parameters (per unit length) $R=G=0$, $\mathrm{L}=2.25 \mathrm{nH} / \mathrm{cm}$ and $\mathrm{C}=4.70 \mathrm{pF} / \mathrm{cm}$, is used as a capacitor at 14.7 GHz . Find the value of the capacitance. (2p).
5. The scattering parameters of a transistor at 14.5 GHz are as follows:

| $\mathrm{S}_{11}$ |  | $\mathrm{~S}_{12}$ |  | $\mathrm{~S}_{21}$ |  | $\mathrm{~S}_{22}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mag. | Ang. | Mag. | Ang. | Mag. | Ang. | Mag. | Ang. |
| 0.680 | $105.5^{\circ}$ | 0 | $0^{\circ}$ | 1.710 | $-25.5^{\circ}$ | 0.290 | $156.0^{\circ}$ |

a) Design the match at both input and output with single-stub matching sections (shunt stub solution) which offers maximum gain. (1.5p)
b) Draw the match schematic. (0.5p)
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $75 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). (1p)
e) If however you know the real value of $S_{12}=0.135 \angle 5.5^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)

Course : MDCR - EDOS412T
Enrollment Year: $\qquad$ Examination Session $\qquad$ January $\qquad$ / __2019

# SUBJECT No.30 <br> Time allowed: 2 hours; All materials/equipments authorized 

Instructor: conf. Radu Damian Student: $\qquad$ Grupa $\qquad$

Note. Except where otherwise specified, assume $50 \Omega$ reference impedance.
Note. Any CAD solution (Matlab, Mathcad, ADS) must be accompanied by the submission of the script/project at the end of the examination.

1. For a load composed from a $52 \Omega$ resistor series with a 0.48 pF capacitor, at 7.4 GHz , compute the normalized admittance (1p) and the normalized impedance (1p).
2. For a normalized impedance equal to $0.900-\mathrm{j} \cdot 0.900$ compute the corresponding reflection coefficient ( $\mathbf{0 . 5 p}$ ) and then plot on a Smith Chart (only the external circle and the complex plane axes) the corresponding point ( $\mathbf{0 . 5 p}$ ).
3. A quarter wave transformer is designed to match a $36 \Omega$ load to a $50 \Omega$ source at 9.3 GHz . Which is the impedance seen by the source at 2.8 GHz . ( $\mathbf{2 p}$ )
4. A $\lambda / 13$ section of an open-circuited transmission line, with parameters (per unit length) $R=G=0$, $\mathrm{L}=1.30 \mathrm{nH} / \mathrm{cm}$ and $\mathrm{C}=3.70 \mathrm{pF} / \mathrm{cm}$, is used as a capacitor at 12.2 GHz . Find the value of the capacitance. (2p).
5. The scattering parameters of a transistor at 14.0 GHz are as follows:

| $\mathrm{S}_{11}$ |  | $\mathrm{~S}_{12}$ |  | $\mathrm{~S}_{21}$ |  | $\mathrm{~S}_{22}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mag. | Ang. | Mag. | Ang. | Mag. | Ang. | Mag. | Ang. |
| 0.660 | $110.0^{\circ}$ | 0 | $0^{\circ}$ | 1.770 | $-20.0^{\circ}$ | 0.270 | $163.0^{\circ}$ |

a) Design the match at both input and output with single-stub matching sections (shunt stub solution) which offers maximum gain. (1.5p)
b) Draw the match schematic. (0.5p)
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $85 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). (1p)
e) If however you know the real value of $\mathrm{S}_{12}=0.130 \angle 8.0^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)

b) Draw the match schematic. ( $\mathbf{0 . 5 p}$ )
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $105 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). ( $\mathbf{1 p}$ )
e) If however you know the real value of $\mathrm{S}_{12}=0.090 \angle-25.2^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)

UNIVERSITATEA TEHNICĂ "GHEORGHE ASACHI" DIN IAŞI
Faculty / Department: Electronics, Telecommunications and Information Technology
Domain: Telecommunication Technologies and Systems
Course : MDCR - EDOS412T
Enrollment Year: $\qquad$ Examination Session $\qquad$ January $\qquad$ / __2019

# SUBJECT No. 40 <br> Time allowed: 2 hours; All materials/equipments authorized 

Instructor: conf. Radu Damian Student: $\qquad$ Grupa $\qquad$

Note. Except where otherwise specified, assume $50 \Omega$ reference impedance.
Note. Any CAD solution (Matlab, Mathcad, ADS) must be accompanied by the submission of the script/project at the end of the examination.

1. For a load composed from a $26 \Omega$ resistor series with a 0.67 nH inductor, at 9.8 GHz , compute the normalized admittance (1p) and the normalized impedance (1p).
2. For a normalized impedance equal to $0.900-\mathrm{j} \cdot 0.990$ compute the corresponding reflection coefficient ( $\mathbf{0 . 5 p}$ ) and then plot on a Smith Chart (only the external circle and the complex plane axes) the corresponding point ( $\mathbf{0 . 5 p}$ ).
3. A quarter wave transformer is designed to match a $65 \Omega$ load to a $50 \Omega$ source at 8.2 GHz . Which is the impedance seen by the source at 3.0 GHz . ( $\mathbf{2 p}$ )
4. A $\lambda / 12$ section of an open-circuited transmission line, with parameters (per unit length) $R=G=0$, $\mathrm{L}=1.30 \mathrm{nH} / \mathrm{cm}$ and $\mathrm{C}=4.65 \mathrm{pF} / \mathrm{cm}$, is used as a capacitor at 11.7 GHz . Find the value of the capacitance. (2p).
5. The scattering parameters of a transistor at 13.2 GHz are as follows:

| $\mathrm{S}_{11}$ |  | $\mathrm{~S}_{12}$ |  | $\mathrm{~S}_{21}$ |  | $\mathrm{~S}_{22}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mag. | Ang. | Mag. | Ang. | Mag. | Ang. | Mag. | Ang. |
| 0.638 | $142.4^{\circ}$ | 0 | $0^{\circ}$ | 1.698 | $-25.4^{\circ}$ | 0.550 | $-151.8^{\circ}$ |

a) Design the match at both input and output with single-stub matching sections (shunt stub solution) which offers maximum gain. (1.5p)
b) Draw the match schematic. (0.5p)
c) Which is the transducer power gain we obtain in this case (in dB)? ( $\mathbf{1 p}$ )
d) For a $105 \mu \mathrm{~W}$ input signal compute the power of the output signal (both mW and dBm ). ( $\mathbf{1 p}$ )
e) If however you know the real value of $\mathrm{S}_{12}=0.090 \angle-32.4^{\circ}$ check whether the transistor is stable with the match you designed at a). (1p)
